good news!

HIGH-QUALITY CARE FOR MORE PATIENTS

Digital services make it possible to treat more patients with existing resources, while improving quality and customer satisfaction. Care is provided on time and physician visits are enhanced, because the patient provides information for the professionals. Process efficiency can be improved with the eHealth development program.

WORK IS MORE MEANINGFUL

The eHealth development program facilitates the development of digital services that make professional routines easier. The work of professionals is more meaningful when routines and wasted time are reduced. Patient guidance and information is provided in a secure channel. Personnel can contribute to the development of their own work.

IMPROVED OPERATIONAL IMPACT

Data collected on the IT service platform supports operational development and knowledge-based management. It also offers new research opportunities. The Health Village network offers opportunities to employ practices that have been tested elsewhere and

are proven functional. The Health Village concept can be adapted to meet the needs of different patient segments.
